You want something that removes it from your computers and other electronics. For the past 10 years, I've been using whatever I had around to vacuum PC cases. Small car vacuums, the hose attachment on my Dyson ball, etc. To me, it was hard to justify spending hundreds of dollars on a regular vacuum for my house. But the cheaper alternatives on Amazon had pretty bad reviews. So they didn't seem like an improvement over what I was currently doing. So I took the chance and bought the 3M. But it turns out, it's not really advertised in any of the pictures I see posted so I'll post one of my own after this review, that the lid of the case, when it opens, contains a door that's held shut by a small strip of

velcro.<http://mestan.by/images/d-link-dwl-900ap+-manual.xml>

You remove the slip, the door opens, and everything's there. When closed, the vacuum is basically a closed toolbox with a handle on top. Everything you need is contained in there nothing can be forgotten, fall out, etc. This makes it great for transporting it in your car, or carrying it around your building. There's actually a little extra room in the top lid so you can stash a Philips screwdriver in there too, or any other small items you feel you might need when using this. I plug it in and start cleaning, and I'm able to get every single bit of dust out of this computer. When using my other makeshift electronic vacuums, they had no problem getting the big chunks of dust that are highly visible and accessible. Vents, edges of the case, etc. And some areas I couldn't get at all. The attachments you get on car vacuums and floor vacuums are meant to get in the corners of your house and car. But this 3M vacuum has a flexible enough hose and plenty of attachments to not only get the stuff you originally got in there to get, but also all of the surface dust. It makes things look brand new when you're done with them. You can get in between PCI cards and RAM modules, get the dust within the individual fins of heatsinks, off the blades of fans, etc. If you can see it, you can get it. About the noise. It's about the same as the vacuums I've used before. It's not something I'd use at night when people are sleeping, and the pets still run when I turn it on. I've only used it once, and that was my experience. Down the road I may update this review as I use it more often but it seems perfect. The only thing I'd change is to make the manual slightly thinner so it fits up in the lid instead of on the top of the white plastic box. It's not like I opened it before I started cleaning or anything, though. You can probably leave that out of the case if it bothers you too much. UPDATE 5 years later, still 5 stars. I'm still using the original canister too.

I used it maybe 10 times on other people's computers while performing software diagnostics, and as a courtesy I always open them up and clean out the dust. No surprise to anyone, the people who typically pay to have a virus removed or their computer "tuned up" never ever! clean out their PC so the internals are often very nasty. But between cleaning their PC's and my own which doesn't get too crazy as I keep it off the floor, this vacuum is still going strong after 5 years and I didn't even replace the canister yet. If it died today I'd still repurchase it but it gives no sign of giving up or getting remotely full. The received ones look similar but they are NOT 3M. They are branded SCS. We got scammed 100 USD per unit. This vacuum is strong and the attachments, especially the hose are made out of material that is easy to use. What I mean by that is the hose is very flexible and stretches with ease. Not cheap plastic that will break and get hard over time. I am very pleased with the unit and I just wish I had purchased it sooner. As far as the noise level, you can't move air without making noise. If there was no noise, there would not be any movement of air. No air movement means no vacuum for sucking to clean. This causes a large accumulation of paper dust in our scanners, and they require basic cleaning daily, and a deeper cleaning each month. This vacuum addresses that area and has plenty of suction and attachments. This vacuum combined with a dust buster blower are the ideal computer chassis cleaning combination. I can only speculate on the savings we will accumulate by reducing the overheating issues causing failed mother boards, power supplies and memory as a result of clogged ventilation ducts on our computer chassis. Not to mention we will never have to purchase another single can of compressed air. That in itself is a HUGE savings. Thanks for the great product, on time delivery and a price we could afford. This vac does the trick.

It has the right attachments to clean out a PC safely without damaging it. Most importantly I don't need to create a plume of dust by using compressed or canned air. It's the same size as a standard toolbox and very portable. If you have a lot of office equipment, you should keep one handy. I have used these vacuums for years. They are portable, have a good filter and have all the accessories included. You can vacuum up very fine particles without having them go through the filter.
